This major is designed to provide students with the educational foundation in and fundamental understanding of the fields of biochemistry, cell biology, molecular biology and genetics. This foundation will prepare students for work and advanced studies in a wide variety of areas of biological and biomedical sciences including developmental biology, microbiology, virology, biophysics, human biology, pharmacology and plant biology. The major will also prepare students for entry into graduate and professional schools including schools of medicine and pharmacology.

The program includes two required upper-division biology laboratory courses to provide practical experience with modern techniques and useful technology for those seeking positions as lab technicians in clinical and basic research laboratories. The opportunity to select elective courses allows students to pursue either a more broad background in a variety of biology subjects or a focused specialization in a chosen field of study.
